To Whom it May Concern,

I have been working with PL Consulting Corp for about two years and I have been continuously impressed and satisfied with their work. Till this day, PL Consulting has completed many project incentives for Vuteq Canada Inc.; including but not limited to an energy audit, lighting and HVAC, manufacturing equipment Retrofit, compressor replacement .

The fast, friendly and professional service provided by PL Consulting ensures our rebates and savings on our projects are maximized. A detailed report exposed many different areas where the property could further energy savings and thus lower costs. The retrofit of our new injection molding machine was an improvement project implemented by PL Consulting. This allowed Vuteq to complete a project that was already required while providing an incentive to lower project costs. Working to OPA requirements, PL Consulting was able to retain government incentives which amounted to over \$70,350.00 to diminish high energy costs.

PL Consulting is diligent with following up, handling and servicing us as well as provided a timely turnaround time pertaining to incentives. When I am looking into securing government incentives or thinking about another energy saving project, PL Consulting will be the first company I contact.

A handwritten signature in black ink, appearing to read "Joe Oliveira", is written over a horizontal line.
